[Standard connection diagram - Sink]

This diagram shows an example of a standard connection for 240 V class, 45 - 55 kW and 480 V class, 90 - 132 kW **frame size A6**.

Power supply
 240 V class:
 45 - 55 kW Three-phase 200 - 240 V-50/60 Hz
 480 V class:
 90 - 132 kW Three-phase 380 - 480 V-50/60 Hz

2

- *1 EMC filter is built in 480 V class.
- *2 When a braking resistor (optional) is mounted, a braking unit (optional) is also required.
- *3 To supply DC power, connect it to the terminals [PA/+] and [PC/-].
- *4 When the inverter is used with a DC power supply, a circuit to suppress an inrush current should be required. For detail, refer to application manual "DC power supply connect to inverter" (E6582156).
- *5 For the switch function, refer to [2. 3. 5].
- *6 To supply control power from an external power supply for backing up the control power supplied from the inverter, an optional control power supply unit (CPS002Z) is required. In this case, it is used in conjunction with the inverter internal power supply. Set <F647: Control power option failure detection> to back up the control power supply. For details, refer to [6. 30. 20].
- *7 The reset signal is activated by ON→OFF trigger input.
- *8 Connect to power to comply with OVC2 (Over Voltage Category 2). Isolation transformer is necessary when connecting to power supply (OVC3).
