[Standard connection diagram - Sink]

This diagram shows an example of a standard connection for 480 V class, 160 kW (frame size A7).

Power supply

480 V class:  
160 kW Three-phase 380 - 440 V-50 Hz  
Three-phase 380 - 480 V-60 Hz

- \*1 Be sure to mount the attached DC reactor between the terminals [P0] and [PA+].
- \*2 To supply DC power, connect it to the terminals [PA+] and [PC-]. In this case, DC reactor is not required.
- \*3 When the inverter is used with a DC power, a circuit to suppress an inrush current should be required. For detail, refer to application manual "DC power supply connect to inverter" (E6582156).
- \*4 When the inverter is used with a DC power supply, three-phase power input for cooling fan driving is required separately. For details, refer to application manual "DC power supply connect to inverter" (E6582156).
- \*5 External braking resistor (option)
- \*6 For the switch function, refer to [2. 3. 5].
- \*7 To supply control power from an external power supply for backing up the control power supplied from the inverter, an optional control power supply unit (CPS002Z) is required. In this case, it is used in conjunction with the inverter internal power supply. Set <F647: Control power option failure detection> to back up the control power supply. For details, refer to [6. 30. 20].
- \*8 The reset signal is activated by ON→OFF trigger input.
- \*9 Connect to power to comply with OVC2 (Over Voltage Category 2). Isolation transformer is necessary when connecting to power supply (OVC3).
