MARATHON[®] AXIAL AND RADIAL BLOWER MOTORS

Most vector drive applications use Axial and Radial blowers with low rotational speeds, causing motor overheating. The Marathon Motors offers Axial and Radial blower units that can suit varied application requirements. The axial blower is available on XRI[®] and XRI-Severe Duty motors. For the blower motors features, see the features listed based on Rolled Steel construction or Cast Iron construction for these items.

MODIFICATIONS AT THE WAREHOUSE ENSURE CUSTOM SOLUTIONS FASTER.

There is no one size motor that fits all applications. That's why we've expanded our modifications offering on most models. Some modifications can be made and shipped same day while others take a day or two, but the line-ready motor solution you need will be ready to work.

HOW TO ORDER

First determine whether you need a kit to perform the modification, if you do not need a kit, then the modification list price includes all supplies to perform that modification. If a kit is needed, the modification list price is the labor to install the kit. The kit list price and the motor list price are not included. You must add the net price of the motor and kit to the net price of the modification(s) to calculate the total price of the modified motor.

For example, to add a C-Face kit and thermostats to catalog motor E473A, you would calculate the total price price as follows:

	LIST PRICE	MULTI. SYMBOL
B176240.00 (A420)	\$198	S4
Modification MOD2J, add C-Face to 182T-184T frame motor	\$312	S4
Modification MOD14E, add thermostats to 182T-184T frame motor	\$516	S4
TOTAL	\$1,026	

Add the net price of E473A (\$1284 list price times (x) your motor multiplier) to the net adder for the kit and modifications (\$1026 times (x) your Mod Center multiplier of S4) to find the total net price for the modified motor.

MOD CENTRAL

Regal offers the capability to modify stock motors in a matter of days to meet our customer's special needs. MOD CENTRAL is centrally located in Regal's distribution center in Indianapolis, Indiana. This state-of-the-art facility stocks a vast array of motors and accessories along with a staff of skilled technicians who provide the highest quality of service. If you need motor modifications on 20 motors or less and want to avoid special engineering and manufacturing schedules, call your local sales representative and take advantage of our MOD CENTRAL Motor Modification Program.

LEAD-TIME

All lead-times indicated are subject to availability of the stock motors and parts at the time of order placement. If a stock motor is shipped from a remote warehouse to Indianapolis for modification, the cost of the inbound freight will be added to the price of the modified motor and the delivery of the modified motor will be extended by the inbound transit time. (Lead-times in working days are calculated from normal business hours excluding holidays and weekends and do not include the day the purchase order is received.) Large quantities may require additional lead-time.

MOD CENTRAL HOURS

The Modification Center is open from 7:00 a.m. to 5:00 p.m. CST Monday through Friday.

FREIGHT TERMS

Standard terms and conditions apply.

DISCOUNT MULTIPLIER

Discount symbol S4 applies to all list prices, except where noted.

CANCELLATION POLICY

If a Mod Central order is cancelled after the motor is modified but before it ships, a cancellation charge of double the modification charge will be invoiced to the customer. Any Mod Central order cancelled before modifications are completed is subject to a cancellation charge of 25% of the total modification charges for that item.

ONCE SHIPPED MODIFIED MOTORS MAY NOT BE RETURNED FOR CREDIT OR RESTOCKING

STEARNS 56000 SERIES BRAKE KITS - INVERTER DUTY TENV BLACK MAX® AND BLUE MAX® MOTORS - MULTIPLIER SYMBOL E3

For normal (140%) torque rating, do not apply on motors larger than 2 HP. Reduced braking torque and/or longer stopping times can result from applying an undersized brake on higher HP motors.

These brake kits fit on both the Black Max® and Blue Max® TENV motors. These can also be used together with the Double C-Face SL56 encoder to make a closed loop inverter brake motor.

SHAFT GROUNDING KITS

Shaft grounding: Shaft grounding is recommended (NEMA® MG1 31.4.4.3) as an effective means of bearing protection for motors operated from inverter power. One grounding device is adequate to bleed down inverter-sourced shaft voltages, thereby protecting both bearings for motors as large as 6085 frame.

BCP UNIVERSAL KIT:

Kit includes grounding ring, all mounting hardware needed to mount to any standard drive end bracket and instructions.

BCP UNIVERSAL SPLIT RING KIT

Kit is designed to allow BCP mounting without uncoupling the motor. Kit includes grounding ring, all mounting hardware needed to mount to any standard drive end bracket and instructions. Shaft ground rings fit these NEMA frame shaft extensions listed below, they are designed to mount on the shaft end. For larger frames, please contact Regal.

BCP™ KIT:

Kit includes grounding ring, adhesive mounting hardware and instructions (for domestic produced products only).
